

ABSTRACT

1 A method and system for selecting a download technology
2 for downloading information to a remote device. The
3 method and system includes providing a communications
4 operator with a plurality of different download
5 technologies; transmitting data from the remote device to
6 the communications operator for determining a download
7 technology capability of the remote device by the
8 communications operator; and automatically selecting one
9 of the download technologies from the plurality of
10 download technologies by the communications operator to
11 download information to the remote device based upon the
12 download technology capability of the remote device.
